

Conflict Minerals Report

Statements in this Conflict Minerals Report, which express a belief, expectation or intention, as well as those that are not historical fact, are forward-looking statements, including statements related to our compliance efforts and expected actions. These forward-looking statements are subject to various risks, uncertainties and assumptions, including, among other things, our customers' requirements to use certain suppliers, our suppliers' responsiveness and cooperation with our due diligence efforts, our ability to implement improvements in our conflict minerals program and our ability to identify and mitigate related risks in our supply chain. If one or more of these or other risks materialize, actual results may vary materially from those expressed. For a more complete discussion of these and other risk factors, see our other filings with the Securities and Exchange Commission ("SEC"), including our Annual Report on Form 20-F for the year ended December 31, 2015. We caution that undue reliance should not be placed on these forward-looking statements, which speak only as of the date of this report, and we undertake no obligation to update or revise any forward-looking statement, except to the extent required by applicable law.

This is the Conflict Minerals Report for Rada Electronic Industries Ltd. ("Rada" , "we" or "our"), filed with the SEC pursuant to Rule 13p-1 under the Securities Exchange Act of 1934 (the "Rule") for the reporting period from January 1, 2015 to December 31, 2015. The Rule was adopted by the SEC to implement reporting and disclosure requirements related to conflict minerals as directed by the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (Dodd-Frank Act). The Rule imposes certain reporting obligations on SEC registrants whose manufactured products contain conflict minerals which are necessary to the functionality or production of their products. "Conflict minerals" are defined as cassiterite, columbite-tantalite, gold, wolframite, and their derivatives, which are limited to tin, tantalum, tungsten, and gold (3TG) for the purposes of this assessment.

If a registrant can establish that the conflict minerals in its products originated from sources other than the Democratic Republic of the Congo (DRC) or an adjoining country, or from recycled and scrap sources, the registrant must submit a specialized disclosure report under Form SD that describes the steps that the registrant took to determine the origin of the conflict minerals in its products.

If a registrant has reason to believe that any of the conflict minerals in its supply chain may have originated in the DRC or an adjoining country, or if the registrant is unable to determine the country of origin of those conflict minerals, then the registrant must exercise due diligence on the conflict minerals' source and chain of custody, and the registrant must annually submit a Conflict Minerals Report to the SEC that includes a description of those due diligence measures.

1. Company Overview

Rada Electronic Industries Ltd. ("RADA" or "we") is an Israeli based defense electronics contractor specializing in the development, manufacture, marketing and sales of military avionics systems for manned and unmanned aircraft, inertial navigation systems for air and land platforms and tactical land radars for force and border protection applications.

2. Products Overview

We develop, manufacture and sell defense electronics including, avionics solutions (including avionics for unmanned aerial vehicles), airborne data/video recording and management systems, inertial navigation systems and tactical land radars for defense forces and border protection systems. In addition, we continue to sell and support our legacy commercial aviation products and services, mainly through our Chinese subsidiary.

As an electronic equipment manufacturer, the 3TG conflict minerals are necessary to the functionality of our products as follows:

Conflict Minerals Report

- Tin is used for electronic components soldering.
- Tantalum is used in various capacitors.
- Tungsten is used as weight components in one of our products.
- Gold is used for internal wiring in components, as coating in Printed Wiring Boards (PWB's) and mechanical parts.

At this point in time, in spite of actions and measures taken, as described herein, RADA cannot determine all the sources of the 3TG Minerals used in its products.

3. Reasonable Country of Origin (RCOI)

We developed a risk-based approach that focuses on all suppliers involved in the manufacture of the majority of our products.

Utilizing the Conflict Free Sourcing Initiative ("CFSI") standard Conflict Minerals Reporting Template ("CMRT"), we surveyed these suppliers. Additionally, we sent letters to our suppliers, informing them of the Rule and Rada's policy on conflict minerals.

4. Design of Our Due Diligence

Based on the findings of our RCOI, we designed our due-diligence process in conjunction with the Organisation for Economic Co-operation and Development Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas, Second Edition (2013) ("OECD Guidance"), and the related supplements for tin, tantalum, tungsten and gold.

Rada has processes in place for the purpose of exercising due diligence in the supply chain. The design of the due diligences processes conforms substantially to the OECD Guidance as it relates to "downstream" purchasers of products and components. The due diligence processes have been described below under sub-headings corresponding to the five-step framework of the OECD Guidance.

5. Due Diligence Performance

Step 1 - Establish strong company management systems:

A Conflict Minerals team assigned in 2013 has taken the following measures:

- a. Reaffirm the Conflict Mineral Policy, supporting the goal and objectives of the Act, and communicated it in its internet site and to its suppliers. Our policy can be accessed at: <http://www.rada.com/corp/policies/2-info/108-conflict-minerals-policy.html>. The policy emphasis RADA commitment to the control of the conflict minerals, include measures to be taken against suppliers that fail to report properly.

- b. Monitor the action and progress of the program.

The conflict minerals control team consist of:

1. Director, Quality Management – Team Leader
2. Controller - Team Member
3. Senior Buyer – Team member
4. Components Engineer – Team Member

Step 2 - Identify and assess risk in the supply chain:

Conflict Minerals Report

We communicated to manufacturers the requirement to report the status of conflict minerals usage in their products. Letter and Report examples were sent to manufacturers. We analyzed the supply chain tiers, identifying the potential risky manufacturers (i.e., not providing the required data, or providing erroneous information.) Repeated requests were sent to risky manufacturers.

Step 3 - Design and implementation of a strategy to respond to identified risks:

Data received from manufacturers in form of CMRT Excel reports was analyzed and accumulated to integral RADA report. Only about 50% of manufacturers provided the data in analyzable format. Other sent policy and verbal declarations.

RADA is member in The 'Israeli Users Association of Advanced Technologies in Hi-Tec Integrated Systems' (ILTAM) work group on the subject. Our dedicated staff attends seminars and webinars on the subject.

Step 4: Carry Out Independent Third Party Audit of smelter/refiner's due diligence practices:

Rada does not have a direct relationship with 3TG smelters and refiners. As such, we do not perform direct audits of smelters and refiners in our supply chain, but rather, rely on due diligence performed by organizations such as the CFSI.

We contacted outside parties to perform the conflict minerals' analysis. We received quotation from 3 potential parties and are still in negotiation.

Step 5: Report annually on supply chain due diligence:

Rada's Conflict Mineral Report is filed with SEC and can be found on our website, at http://www.rada.com/images/RADA_-_Conflict_Minerals_Report.pdf

6. Results for the 2015 Calendar Year

Based on an internal assessment and information provided by components manufacturers, RADA identified 240 suppliers who provided components likely to incorporate 3TG necessary to the functionality of the covered products (the "3TG Suppliers"). This Report reflects valid responses from 110 of the 240 3TG Suppliers. These 110 suppliers represent the majority of the amount RADA paid to components' suppliers in 2015. Out of these 110 manufacturers, 90 have provided analyzable reports in the form of CMRT. Others have provided verbal declarations and policy statements.

Based on the information provided by our suppliers and information otherwise obtained through the due diligence process, RADA has reasonably identified 430 facilities that may have been used to process the 3TG in its products in 2015. Analyzing the information described above and based on information received through the CFSI, equivalent independent third-party audit programs or otherwise obtained through the due diligence process, RADA identified the origin countries of the facilities. 3TG facilities and their countries of origin are in listed in [Annex I](#).

7. Continuous improvement efforts to mitigate risk

- a. List of reported smelters is given in Annex I of this report.
- b. Continue to request manufacturers for their analyzable conflict mineral report.
- c. Complete the negotiation to outsource the analysis of conflict minerals in order to improve the quality of reports.

Conflict Minerals Report
